LEAGO RIFUMO CAPITAL

How to find trades with the LRC website

One page · 15 minutes a day · leagorifumocapital.co.za

Prayer Nkuna, Analyst · Nov 2026

The idea: the **Scanner** finds candidates → **Top Picks** filters them to the best 5 per market → you **click the company** to check the snapshot → you trade only what passes **5 checks**.

The daily routine

1 News Desk
What moved overnight? Any results or SENS on your names? Menu: News Desk.

2 Sectors & ETFs
Is the market strong today? Trade long only when the index ETFs and your stock's sector score well. Menu: Research → Sectors & ETFs.

3 Top Picks
Your shortlist: Trading (weeks) or Investment (months), JSE or New York. Note new names and the "since added" figure. Free account needed.

4 Click the company
The snapshot shows trend, setup, valuation, news and next results. The one-page summary button gives the full report.

5 Scanner setups
Filter for Breakout and Retest. Strong names that just missed Top Picks are your backup ideas. Menu: Research → Stock Scanner.

6 Calendars
Check results and ex-dividend dates. Menu: Calendars → Earnings / Dividends.

WHEN	JSE: 07:00–08:45 (opens 09:00)	New York: about 15:00 (opens 15:30 SAST)	Review: after 17:47, when the lists update

The 5 checks before any trade

✓ **1. On the list**
In Top Picks, or rated BUY / STRONG BUY in the Scanner.

✓ **2. Right setup**
Breakout or Retest, price near support, above its 50- and 200-day averages.

✓ **3. Not stretched**
RSI between 40 and 70. Above 70: wait for a pullback.

✓ **4. Results check**
No results within 5 days for a new trade. Holding into results? Decide first: take profit, reduce or hold.

✓ **5. Plan before you buy**
Stop about 2 × ATR below entry or just under support. Target at least 3 × your risk. Risk at most 1% of your account per trade.

All 5 pass = trade idea. One fails = Watchlist, check again tomorrow.

Top Picks: what you need to know

How Top Picks are chosen
Liquidity first: at least R20m a day traded on the JSE or $50m in New York, market value R5bn/$5bn+. Then the best scores, at most 2 per sector, 5 per market.

Trading picks
BUY/STRONG BUY, price trending up, RSI 40–75, no results within 5 days. Usually held for days to a few weeks.

Investment picks
Quality grade A or B, not overvalued, healthy balance sheet, at least 15% below our model value, no results within 3 days. Held for months.

How long a pick stays
No fixed time. The list is rebuilt twice a day (06:37 and 17:47 SAST). A company stays while it passes every rule and drops off when one fails or a stronger name replaces it.

When a pick drops off
It is a signal to review your trade, not an automatic sell. Check the snapshot: did the trend break, did RSI overheat, are results close?

WORKED EXAMPLE (4 Nov 2026)

Life Healthcare (LHC) is in Top Picks (Trading), shows a **Retest** of R12.40 support, RSI 56, above both averages, results on 26 Nov (22 days away). Plan: stop about R11.85 (2 × ATR), target about R14.10 (3R), risk 1%. **All 5 checks pass, so it is a trade idea. MTN** broke out, but RSI 70 fails check 3: Watchlist, wait for a pullback to about R206.

Golden rules

- Never risk more than 1% of your account on one trade.
- Do not chase: if RSI is above 70, wait.
- Keep a trade log: date, ticker, reason, entry, stop, target, result.
- Write the stop and target down before you buy.
- Results can gap past your stop: size down if you hold through them.
- Trade the plan, not your feelings.

Education only, not personal financial advice. Trading carries risk; never risk money you cannot afford to lose. Do your own research.
